Ocean Guard integrates 3 APIs to transform data into knowledge

OBIS OCEAN BIODIVERSITY INFORMATION SYSTEM

aisstream.io

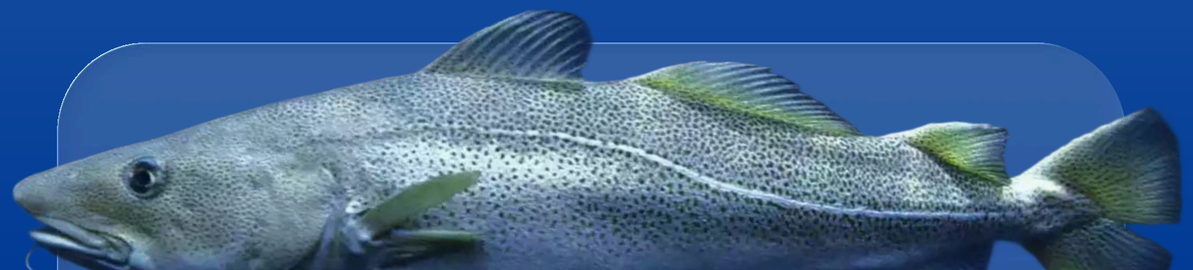

OpenMeteo

OceanGuard integrates these global data sources to calculate real-time threat levels, identifying high-risk fishing activity the moment it enters protected waters.

TRACKED FISHES

BLUEFIN TUNA

(Thunnus thynnus)

The Atlantic Bluefin Tuna is a high-speed apex predator and the most valuable fish in the global sushi market. This extreme economic demand fuels intense industrial fishing and illegal "pirate" harvesting. Because these fish take years to reach breeding age, their populations struggle to recover from the pressure of modern purse seine fleets, making them a primary target for overfishing monitoring.
